The Report referred to in Article 9 of Directive 2003/99/EC

TRENDS AND SOURCES OF ZOONOSSES AND ZOOTIC AGENTS IN HUMANS, FOODSTUFFS, ANIMALS AND FEEDSTUFFS

including information on foodborne outbreaks,
antimicrobial resistance in zoonotic agents and some
pathogenic microbiological agents.

IN 2012

INFORMATION ON THE REPORTING AND MONITORING SYSTEM

Country: Ireland

Reporting Year: 2012

Laboratory name	Description	Contribution
OFML	Official Food Microbiology Laboratory	The majority of samples taken at retail level (catering and retail premises). A small % of samples taken from Distributors, Transporters, Manufacturers, Packers and Primary Producers. Samples submitted to OFMLs for analysis include routine samples, national surveillance samples and samples arising from complaints (Salmonella, Campylobacter, Listeria monocytogenes, VTEC, Staphylococcal enterotoxins)
DSL	Dairy Science Laboratories	Samples taken at processing plants and submitted to DAFF official laboratories for analysis (Salmonella, Listeria monocytogenes, E sakazakii and Staphylococcal enterotoxins)
SFPA	Sea Fisheries Protection Authority	Samples taken at processing plants and submitted to SFPA approved laboratories for analysis (Salmonella, Listeria spp and Histamine)
DAFM	Department of Agriculture, Food and the Marine	Samples taken at DAFM approved processing plants and submitted to a DAFM official laboratory for Salmonella analysis
VPHRL	Veterinary Public Health Regulatory Laboratory	Samples taken at processing plants and submitted to the VPHRL (DAFM official laboratory) for analysis (Salmonella, Listeria monocytogenes and some Campylobacter). Also VPHRL is the NRL for Trichinella

INFORMATION ON THE REPORTING AND MONITORING SYSTEM

Laboratory name	Description	Contribution
CVRL	Central Veterinary Research Laboratory (DAFM official laboratory) Laboratories approved by DAFM	Samples taken at processing plants and submitted to DAFM approved laboratories for analysis (Salmonella). Serotyping performed at the CVRL (isolates from private laboratories). Analysis of official samples also carried out for Salmonella, Campylobacter and VTEC. Antimicrobial resistance data for Salmonella (isolated from industry own checks) has been submitted via the XML pilot programme.
DAFM Regional Veterinary Laboratories (RVLs)	DAFM Regional Veterinary Laboratories located at Dublin, Sligo, Athlone, Kilkenny, Limerick and Cork.	Samples taken from carcass and clinical pathology submissions to the RVLs for purposes of disease diagnosis and control.

PREFACE

This report is submitted to the European Commission in accordance with Article 9 of Council Directive 2003/99/ EC*. The information has also been forwarded to the European Food Safety Authority (EFSA).

The report contains information on trends and sources of zoonoses and zoonotic agents in Ireland during the year 2012 .

The information covers the occurrence of these diseases and agents in humans, animals, foodstuffs and in some cases also in feedingstuffs. In addition the report includes data on antimicrobial resistance in some zoonotic agents and commensal bacteria as well as information on epidemiological investigations of foodborne outbreaks. Complementary data on susceptible animal populations in the country is also given. The information given covers both zoonoses that are important for the public health in the whole European Community as well as zoonoses, which are relevant on the basis of the national epidemiological situation.

The report describes the monitoring systems in place and the prevention and control strategies applied in the country. For some zoonoses this monitoring is based on legal requirements laid down by the Community Legislation, while for the other zoonoses national approaches are applied.

The report presents the results of the examinations carried out in the reporting year. A national evaluation of the epidemiological situation, with special reference to trends and sources of zoonotic infections, is given. Whenever possible, the relevance of findings in foodstuffs and animals to zoonoses cases in humans is evaluated.

The information covered by this report is used in the annual Community Summary Report on zoonoses that is published each year by EFSA.

1. ANIMAL POPULATIONS

The relevance of the findings on zoonoses and zoonotic agents has to be related to the size and nature of the animal population in the country.

2. INFORMATION ON SPECIFIC ZOO NOSES AND ZOONOTIC AGENTS

Zoonoses are diseases or infections, which are naturally transmissible directly or indirectly between animals and humans. Foodstuffs serve often as vehicles of zoonotic infections. Zoonotic agents cover viruses, bacteria, fungi, parasites or other biological entities that are likely to cause zoonoses.

2.1.5 Salmonella serovars and phagetype distribution

The methods of collecting, isolating and testing of the Salmonella isolates are described in the chapters above respectively for each animal species, foodstuffs and humans. The serotype and phagetype distributions can be used to investigate the sources of the Salmonella infections in humans. Findings of same serovars and phagetypes in human cases and in foodstuffs or animals may indicate that the food category or animal species in question serves as a source of human infections. However as information is not available from all potential sources of infections, conclusions have to be drawn with caution.

5. FOODBORNE

Foodborne outbreaks are incidences of two or more human cases of the same disease or infection where the cases are linked or are probably linked to the same food source. Situation, in which the observed human cases exceed the expected number of cases and where a same food source is suspected, is also indicative of a foodborne outbreak.

A. Foodborne outbreaks

System in place for identification, epidemiological investigations and reporting of foodborne outbreaks

National web based system for reporting outbreaks of all human infectious disease (notifiable and non-notifiable). Case based data can be linked to individual outbreaks.

Description of the types of outbreaks covered by the reporting:

Outbreaks of all human infectious disease (notifiable and non-notifiable). Case based data can be linked to individual outbreaks.

National evaluation of the reported outbreaks in the country:

Descriptions of single outbreaks of special interest

Outbreaks of special interest during 2010:

Salmonellosis outbreak associated with raw milk -

<http://www.lenus.ie/hse/bitstream/10147/129538/4/iss5salmonella.pdf>

Salmonellosis outbreak associated with duck eggs -

<http://www.lenus.ie/hse/bitstream/10147/129310/1/iss4duckegg.pdf>

Control measures or other actions taken to improve the situation

Control measures resulting from Salmonellosis outbreak in duck eggs:

a. Production of "Code of Practice for Duck Table Egg Producers"

<http://www.agriculture.gov.ie/farmingsectors/poultry/> DAFF. 2010.

b. Production of "Guidelines for Producers of Small Quantities of Duck Eggs (Backyard Flocks)"

c. Production of "The Diseases of Animals Act 1966 (Control of Salmonella in Ducks) Order 2010 (S.I. No. 565 of 2010)."
