## 3. Declarations of Interest of Working Groups members

In accordance with EFSA's Policy on Independence and Scientific Decision-Making Processes<sup>2</sup> and the Decision of the Executive Director on Declarations of Interest<sup>3</sup>, EFSA screened the Annual Declaration of Interest and the Specific Declaration of Interest filled in by the working group members invited for the present meeting. No Conflicts of Interest related to the issues discussed in this meeting have been identified during the screening process or at the Oral Declaration of Interest at the beginning of this meeting.

## 4. Scientific topic for discussion

### 4.1. Urgent request on review of statements on *Xylella fastidiosa* and its control.<sup>4</sup>

During the first day (21 March) the WG updated the list of questions in preparation to the hearing of the 22 of March (item 5 of the agenda) with Dr. Carlucci and Prof. Lops. The available references were screened and selected for inclusion in the opinion.

During the second day (22 March) the WG welcomed the hearing experts and conducted the hearing, whose notes are provided in paragraph 4.2.

During the third day (23 March) the draft opinion was prepared in order to have its written adoption done by the 31 of March and publication by the 5 of April 2016.

### 4.2. Hearing with Dr. Antonia Carlucci and Prof. Francesco Lops from the University of Foggia (Italy): questions and answers.

1. The experiments started in 2015. What is the expected duration of the experiments described in the article published on the Informatore Agrario (Carlucci et al., 2016)<sup>5</sup>?

The experiments started in 2015. The first year was a preliminary experience which will help shaping better ones (possibly two) additional

<sup>3</sup> <http://www.efsa.europa.eu/en/keydocs/docs/independencerules2014.pdf>

<sup>4</sup> <http://registerofquestions.efsa.europa.eu/roqFrontend/questionLoader?question=EFSA-Q-2016-00183>

<sup>5</sup> Carlucci A., Ingrosso F., Faggiano S., Raimondo M.L. and Lops F., 2016. Strategie per contenere il disseccamento degli olivi. L'Informatore Agrario 8/2016, 58–63.

years of trials. In 2015, for example, the pruning action was very extreme and massive, as it required the removal of large parts of branches from the canopy that were dead. In 2016 we are planning to have the first treatments done again after pruning (that this time won't be so intrusive) during the first week of April.

2. What are currently the conditions, in terms of symptoms expression, of the plants treated in 2015?

The last time we visited the orchards before the seasonal pruning was on 11 February 2016. At that time, the plants did not present major desiccation symptoms, compared to non-treated trees observed in other olive orchards of Lecce province.

3. In 2015 you had 7 replicates per treatment and a total of 18 treatments and 12 products either in single or combined treatments. Do you plan to increase the number of replicates in 2016?

In 2015 we had more than 7 plants for certain treatments, but in order to have homogeneous groups and to keep working on the same plants we will maintain the same design for the experiments that will be conducted this year. However, we will have an additional experiment starting in parallel in 2016, which will involve 9 ha more, distributed in three zones of the Lecce province, different for density and seriousness of observed symptoms.

4. Can you provide more information on the products selected for the trials? How were they selected? How applied?

The 12 selected products and their doses are indicated in the table below.

Commercial name	Type of product	Applied dose (as from label)
Agroallium	Plant protector	0.5-3 l/1000 mq
Biobacter	Antimicrobial	400 ml/hl
Bion	Activator of the auto-defence system into the plant	15g/hl
Prodeo	Fungicide	250 g/hl
IRF-230	Fungicide	300g/hl
Keos	Fertilizer	150-200 g/hl
Kodens	Fertilizer	190 g/hl
Kuprum Red	Fungicide	1,5-2 kg/hl
Rhizosum	Organic soil conditioner	50 gr/hl
Radicon	Natural organic soil conditioner	2-5 kg/1000mq
Remedier	Fungicide	250 g/hl
Fosal Pk	Fertilizer	350 g/hl

Biobacter and Kuprum Red were only applied three times due to late availability, while all the others were applied 6 times during the season, with intervals of 25-30 days, having the first treatment done just after pruning.

In the selection of the 12 products their suitability for organic agriculture and their mechanisms of action was considered and those favouring the good growth of the olive tree and reinforcing its natural capacity to react and resist to pathogens and pests attacks were chosen. The curative effect of some of these products is provided by the presence of copper, which has disinfecting effects, already well recorded in literature on other plant diseases. In fact, another asset for products to be included in the trial was the working spectrum: we need to find treatments able to reinforce the plant reaction to the largest possible number of pathogens and pests (main ones from the area are listed in Carlucci et al., 2016).

Some were sprayed to the canopy while others (Agroallium, IRF-230, Rhizosum, Radicon) were applied to the roots through irrigation.

Concerning management of the vectors, the main action was the mechanical removal of weeds (e.g. hoeing, harrowing, and ploughing). Furthermore, from 2016, we are considering applying very targeted (max 1-2 per season) insecticide treatments in case of need with products approved in organic agriculture (e.g. Neem, pyrethrum).

More in general, we acknowledge that altogether the all management practices had positive and synergistic effects with the treatments.

## 5. Are the tested number of applications and type of products suitable to olive growers?

Actually we are studying the effects of those treatments under optimal conditions. It would be unrealistic to expect that olive growers make 6 applications per season, also in consideration of the cost of some of the tested products. We are therefore also planning an economic cost/benefit analysis at the end of our research experience, in order to identify the best product, or combination of products and strategy of application, responding to the needs of the growers too.
