Albania

TRENDS AND SOURCES OF ZOONOSES AND ZOONOTIC AGENTS IN FOODSTUFFS, ANIMALS AND FEEDINGSTUFFS

including information on foodborne outbreaks, antimicrobial resistance in zoonotic and indicator bacteria and some pathogenic microbiological agents

IN 2018
PREFACE

This report is submitted to the European Commission in accordance with Article 9 of Council Directive 2003/99/EC*. The information has also been forwarded to the European Food Safety Authority (EFSA).

The report contains information on trends and sources of zoonoses and zoonotic agents in Albania during the year 2018.

The information covers the occurrence of these diseases and agents in animals, foodstuffs and in some cases also in feedingstuffs. In addition the report includes data on antimicrobial resistance in some zoonotic agents and indicator bacteria as well as information on epidemiological investigations of foodborne outbreaks. Complementary data on susceptible animal populations in the country is also given. The information given covers both zoonoses that are important for the public health in the whole European Union as well as zoonoses, which are relevant on the basis of the national epidemiological situation.

The report describes the monitoring systems in place and the prevention and control strategies applied in the country. For some zoonoses this monitoring is based on legal requirements laid down by the European Union legislation, while for the other zoonoses national approaches are applied.

The report presents the results of the examinations carried out in the reporting year. A national evaluation of the epidemiological situation, with special reference to trends and sources of zoonotic infections, is given. Whenever possible, the relevance of findings in foodstuffs and animals to zoonoses cases in humans is evaluated.

The information covered by this report is used in the annual European Union Summary Reports on zoonoses and antimicrobial resistance that are published each year by EFSA.

The national report contains two parts: tables summarising data reported in the Data Collection Framework and the related text forms. The text forms were sent by email as pdf files and they are incorporated at the end of the report.

1. Institutions and Laboratories involved in zoonoses monitoring and reporting

Albanian National Food Authority (NFA) has 7 laboratories, operational of testing of the categories: physic-chemical and microbiological, animal health and welfare, and plant protection. Their functions are based on the Law No. 9863, dated 28.01.2008 “On food” amended, Law No. 10465, dated 29.09.2011 “On veterinary service in the Republic of Albania” amended, Law No. 105/2016, dated 27.10.2016 “On plant protection”, Law No. 10433, dated 16.6.2011 “On inspection in the Republic of Albania”, as well as orders and instructions of the Minister of Agriculture and Rural Development upon Authority’s objectives. Also, laboratory activity is part of the official control and its activities are based upon an annual risk based national plan, taking into account their capacities, monitoring plans, emergency plans as well as other activities provided by the business operators.

Samples taken from NFA inspectors are analysed in regional laboratories, reference laboratory (Institute of Food Safety and Veterinary) and other labs pursuant to NFA objectives, including “Noval Laboratory”, an authorized lab by Order of the Minister No. 524 dated 23.09.2019 On authorization of performing laboratory tests of samples taken from NFA, during official controls as well as the type of the analyses that it is authorized to carry out. NFA laboratories perform analyses for all kinds of samples taken from field inspectors under the official control programmes or self-check activities from food business operators. The documentation used is based mainly on Order No. 24 of the Agricultural Minister “On unification of procedures, methods and docs of laboratories’ functioning”- from submitting the sample to the lab, issuing the test report, also the procedures followed. Also, based on this order is performed online the information exchange with other institutions in cases of non-conformities, to make possible the identification and measures to take for the products that threat food safety.

Short description of the institutions and laboratories involved in data collection and reporting
2. Animal population

1. Sources of information and the date(s) (months, years) the information relates to\(^{(a)}\)

Ministry of Agriculture and Rural Development for 2018 – Number of heads for livestock and their production

2. Definitions used for different types of animals, herds, flocks and holdings as well as the production types covered

3. National changes of the numbers of susceptible population and trends

4. Geographical distribution and size distribution of the herds, flocks and holdings\(^{(b)}\)

Livestock productions for 2018 in 000/tonnes

Milk total 000 litres - 1144,353:
- cows – 974
- sheep – 85
- goats – 86

Eggs/Mill/pieces – 828

It is used also the milked milk used to feed calves:

5. Additional information

\(^{(a)}\): National identification and registration system(s), source of reported statistics (Eurostat, others)

\(^{(b)}\): Link to website with density maps if available, tables with number of herds and flocks according to geographical area
3. General evaluation*: Please add the zoonotic agent

1. History of the disease and/or infection in the country(a)

**Disease status text form-ovine brucellosis**
Albania is not officially free from B. melitensis. Vaccination for Brucellosis in Small Ruminants started in 2012. Vaccination is continuing and the records are entering in the RUDA system. Serum samples taken of a national monitoring were examined for specific antibodies vaccs. The samples were with Rose Bengal test. At the National Reference Laboratory, 804 caprine/ovine serum samples were tested. The results confirmed those of previous years.

2. Evaluation of status, trends and relevance as a source for humans

**Disease status text form-bovine brucellosis**
Albania is not officially free from bovine brucellosis. Active surveillance and control against bovine brucellosis plan has been elaborated in conjunction with EU funded PAZA project. The surveillance is based on three testing stages. The active surveillance plan started at March targeting large farms for brucellosis with more than 10 animals. There are sampled 1100 herds with a total of animal of 27,550. The samples from the positive animal slaughter and will be sent for sero typing in a national reference laboratory.

**Disease status text form-bovine tuberculosis**
There has been a change of the strategy for the control of Tuberculosis in bovine animals. From the passive surveillance in the slaughterhouses, on autumn 2018 plan to start the active surveillance on testing of the large farms (more than 10 animals). There are 1100 herds with a total of animal about 27,550 which will be tested with the allergen for the detection of the cattle affected from Tuberculosis disease; Surveillance system. The control of tuberculosis is based on Council Directive 64/432/EEC, Frequency of testing depends on: - the introduction of new animals into a herd (mandatory examination at purchase) - the results of tuberculin testing- the detection of suspected bovines- the epidemiological investigation related to suspected or infected animals or herds (tracing-on and tracing-back) - the follow-up testing of infected and/or eradicated herds during 5 years after partial or total stamping-out.

Tuberculin skin testing: single (bovine tuberculin) or comparative (bovine/avian tuberculin) testing. Laboratory examination of all suspicious lesions by culture: isolation and identification Organs: lymph nodes, lungs, liver and kidneys. - A 'bovine' is defined as infected with bovine tuberculosis if the animal is positive by skin testing or if Mycobacterium bovis is isolated by culture or confirmed by laboratory analysis (PCR). - A 'holding' is defined as infected if Mycobacterium bovis was isolated by culture from an animal of the holding. - Simple skin test with bovine tuberculin- Comparative skin test with bovine and avian tuberculin- Ziehl-Neelsen coloration- Culture for isolation - PCR on lesions / organs- PCR on culture National surveillance program by the Competent Authority (FASFC) on a mandatory legal base. Draw special attention and focus on t If M. bovis is suspected, all animals in the herd of origin are skin tested, the herd is considered as the epidemiological unit. A complete epidemiological investigation is performed. After tracing-back and tracing-on all animals of 'contact' holdings are examined by skin testing. If any doubtful or positive result of the skin test is detected, the FASFC may decide to re-examine the reactor animals (additional tests e.g. comparative skin testing with avian and bovine tuberculin and/or Interferon-gamma testing) or to a direct mandatory slaughter of the reactors (test slaughter) for additional analysis. In case a suspicious lesion is detected at post-mortem examination, a sample is sent to the National reference laboratory for analysis.

In 2018, 1 outbreaks of bovine tuberculosis were detected. On the first outbreak (2018-01) a general stamping-out was applied tuberculation. From outbreak 2018, samples obtained examined by bacteriological and PCR test.
### Disease status text form- Anthrax

Anthrax vaccination was carried out from May 2018 – June 2018. The active focies are vaccinated and there for 2018 are about 70,000 animal vaccinates. The records are in process of entering in the Livestock and Veterinary Information System RUDA.

In 2018 we have 114 suspected cases inn small ruminants and cattle. From dead animal taken blood and nasal swab which examined with bacteriological test.

### Disease status text form- Rabbies

During the spring of 2018 has occurred the first vaccination campaign against rabies (560,000 dozes distributed to 27,899 km²), and on autumn 2018 planet to start the second vaccination campaign for the distributing of 560,000 dozes vaccine. This control programme financed from European Union and 2018 is the fifth and last year of vaccination.

<th>4. Additional information</th>
</tr>
</thead>
</table>

* For each zoonotic agent  
\(^{(a)}\): Epidemiological evaluation (trends and sources) over time until recent/current situation for the different relevant matrixes (food, feed, animal). If relevant: the official “disease status” to be specified for the whole country and/or specific regions within the country  
\(^{(b)}\): If applicable
4. Description of Monitoring/Surveillance/Control programmes system*: Please add the matrix and zoonotic agent

1. Monitoring/Surveillance/Control programmes system (a)

Samples presented for prevalence are taken from the inspectors of the regional directorates of NFA, based on the order of Minister of Agriculture and Rural Development No. 4, dated 20.04.2018 "On approval of "The national plan of official controls, risk-based and sampling for food, feed and plant protection as well as sampling plan in Border Inspection Posts", as well as HACCP business. They have been tested in the regional directorates laboratories, currently not accredited, according the Order upper mentioned. Sampling, testing method, according the procedures defined in the national legislation and specifically samples testing for prevalence listeria and salmonella is performed according to the Order No. 645, dated 23.12.2016 on “Substituting Annex I, Order No. 234 dated 20.05.2014, on approval of the regulation “On microbiological criteria for food products”. This instruction is partly aligned to the Regulation CE 2073/2005.

2. Measures in place (b)

In cases of non-conformity, a rapid notification occurs on line, based on the Order no. 24 (upper mentioned) among the respective structures defined in this order: NFA; FSVI; MARD. After notification, inspectors perform in site inspection and verification and take appropriate measures according the national legislation into force.

3. Notification system in place to the national competent authority (c)

On line rapid notification (see above) from laboratory and respective inspection unit in the NFA Regional Directorate.

4. Results of investigations and national evaluation of the situation, the trends (d) and sources of infection (e)

Cases of non-conformity during 2018 for tested samples in FSVI, was not possible to be reported as data to EFSA. After each notification from these cases, inspectors of NFA Regional Directorate perform in site inspection and verification and take appropriate measures according the national legislation into force.

5. Additional information

* For all combinations of zoonotic agents and matrix (Food, Feed and Animals) for ‘Prevalence’ and ‘Disease Status’: one text form reported per each combination of matrix/zoonoses or zoonotic agent

(a): Sampling scheme (sampling strategy, frequency of the sampling, type of specimen taken, methods of sampling (description of sampling techniques) + testing scheme (case definition, diagnostic/analytical methods used, diagnostic flow (parallel testing, serial testing) to assign and define cases. If programme approved by the EC, please provide link to the specific programme in the Commission’s website.

(b): The control program/strategies in place, including vaccination if relevant. If applicable a description of how eradication measures are/were implemented, measures in case of the positive findings or single cases; any specific action decided in the Member State or suggested for the European Union as a whole on the basis of the recent/current situation, if applicable. If programme approved by the EC, please provide link to the specific programme in the Commission’s website.

(c): Mandatory: Yes/No.

(d): Minimum five years.

(e): Relevance of the findings in animals to findings in foodstuffs and for human cases (as a source of infection).
5. **Food-borne Outbreaks**

1. **System in place for identification, epidemiological investigations and reporting of food-borne outbreaks**

   Food borne outbreaks are monitored form the Public Health Institute and they report also to the WHO. Notification system in place functioning under Public Health Institute (PHI) from field to the relevant structures. After notification occurs, PHI informs immediately their line Ministry (Ministry of Health), Ministry of Agriculture and Rural Development and NFA.

2. **Description of the types of outbreaks covered by the reporting**

   - **Foodborne intoxication (Salmonella typhimurium)** – Number of cases, total – 28
     - Number of cases (laboratory-confirmed) – 7
     - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
     - Duration of outbreak - 05-06 August
     - Importation – No
     - Geographical area affected – Elbasan
     - Population group affected - General Population
     - Cause of outbreak and special contributing circumstances – Foodborne
     - Action (e.g. investigation, containment clinical and public health measures) – Yes
     - Partners (national and international) in responding to the outbreak – PHI, MOH

   - **Foodborne intoxication (Salmonella typhimurium)** – Number of cases, total – 26
     - Number of cases (laboratory-confirmed) – 2
     - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
     - Duration of outbreak - 05-06 August
     - Importation – No
     - Geographical area affected – Elbasan
     - Population group affected - General Population
     - Cause of outbreak and special contributing circumstances – Foodborne
     - Action (e.g. investigation, containment clinical and public health measures) – Yes
     - Partners (national and international) in responding to the outbreak – PHI, MOH

   - **Foodborne intoxication (Salmonella typhimurium)** - Number of cases, total – 23
     - Number of cases (laboratory-confirmed) – 7
     - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
     - Duration of outbreak - 06-08 August
     - Importation – No
     - Geographical area affected – Elbasan
     - Population group affected - General Population
     - Cause of outbreak and special contributing circumstances – Foodborne
     - Action (e.g. investigation, containment clinical and public health measures) – Yes
     - Partners (national and international) in responding to the outbreak – PHI, MOH

   - **Foodborne intoxication (Salmonella Stanleyville)** - Number of cases, total – 41
     - Number of cases (laboratory-confirmed) – 3
     - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
     - Duration of outbreak - 06-08 August
     - Importation – No
     - Geographical area affected – Fier
     - Population group affected - General Population
     - Cause of outbreak and special contributing circumstances – Foodborne
     - Action (e.g. investigation, containment clinical and public health measures) – Yes
Partners (national and international) in responding to the outbreak – PHI, MOH

- **Foodborne intoxication (Salmonella O polyvalent)** - Number of cases, total – 25
  - Number of cases (laboratory-confirmed) – 5
  - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
  - Duration of outbreak - 25-29 August
  - Importation – No
  - Geographical area affected – Librazhd
  - Population group affected - General Population
  - Cause of outbreak and special contributing circumstances – Foodborne
  - Action (e.g. investigation, containment clinical and public health measures) – Yes
  - Partners (national and international) in responding to the outbreak – PHI, MOH

- **Foodborne intoxication (Salmonella enteritidis)** - Number of cases, total – 8
  - Number of cases (laboratory-confirmed) – 4
  - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
  - Duration of outbreak - 21-23 May
  - Importation – No
  - Geographical area affected – Tirana
  - Population group affected - General Population
  - Cause of outbreak and special contributing circumstances – Foodborne
  - Action (e.g. investigation, containment clinical and public health measures) – Yes
  - Partners (national and international) in responding to the outbreak – PHI, MOH

- **Foodborne intoxication (Norovirus)** - Number of cases, total – 6
  - Number of cases (laboratory-confirmed) – 5
  - Number of deaths, total (clinically, epidemiologically or laboratory-confirmed cases) – 0
  - Duration of outbreak - 11-12 July
  - Importation – No
  - Geographical area affected – Vlora
  - Population group affected - General Population
  - Cause of outbreak and special contributing circumstances – Foodborne
  - Action (e.g. investigation, containment clinical and public health measures) – Yes
  - Partners (national and international) in responding to the outbreak – PHI, MOH

### 3. National evaluation of the reported outbreaks in the country

- **3.1** Cases are monitored from respective institutions.

- **3.2** Any specific action decided in the Member State or suggested for the European Union as a whole on the basis of the recent/current situation

### 4. Descriptions of single outbreaks of special interest

- **4.1** National and international partners in responding to the outbreak – PHI, MOH

### 5. Control measures or other actions taken to improve the situation

- **5.1** Action (e.g. investigation, containment clinical and public health measures)

### 6. Additional information

- **6.1** Write text here please

- **6.2** Trends in numbers of outbreaks and numbers of human cases involved, relevance of the different causative agents, food categories and the agent/food category combinations, relevance of the different type of places of food production and preparation in outbreaks, evaluation of the severity of the human cases.
