

# EFSA workshop on updated Guidance document on the application Benchmark dose in chemical risk assessment

**Marco Binaglia**

Mam Tox Team Leader, **PREV Unit**

- The update of the EFSA Scientific Committee Guidance on the use of the benchmark dose approach in risk assessment has been adopted on 21 September and is currently in publication.
- A Workshop is being organised to take place in February 2023.
  - To disseminate the update of the guidance highlighting the newly introduced concepts and methodological framework proposed.
  - **To focus on pesticide examples in order to get the community of experts in this area aware and engaged.**
- The Workshop will be organized in a hybrid format (date and venue to be confirmed).
- Seats for physical attendance will be reserved to MS experts in the area of pesticides (mammalian toxicology and ecotoxicology).
- MSs will be notified with more information and will be requested to nominate experts to be invited to the Workshop.
