# Inspections and Samples: Risk Based versus Random

J. Meekes, I. Kopacka

52nd EFSA Focal Point meeting – 2023-09-27

# Background

## What challenges do we face?

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

### Advantages of representative data

- Unbiased
- Suitable for parameter estimates
- No „blind spots“

### Advantages of risk-based data

- Efficient (when detection oriented)
- On high-risk units; decreased inspection burden for low-risk units

### Problem:

**What to do when both representative and risk-based goals are of interest?**

Efficiency + Inference (risk factor validation, prevalence estimates etc.)

# Goals of Phase 1

## Project year 2023

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

- Assess the current situation regarding the use of risk-based and random controls at AGES and NVWA
- Review the literature on the topic of combining risk-based and random controls
- Develop approaches to
  - re-use data from risk-based controls for representative purposes
  - split controls into separate random and risk-based samples and allocate resources based on objective criteria

# WP Inventory of current practice

## Case descriptions

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

### AGES

- Feed inspection plan (manufacturing and placing on market)
- Food safety sampling plan - retail
- Freedom from an animal disease: *Brucella melitensis* in sheep and goats

### NVWA

- National plan for microbiological safety of food products
- Amusement park rides and playground equipment
- Animal welfare in pigs

# WP Inventory of current practice

## Quantitative Inventory NVWA

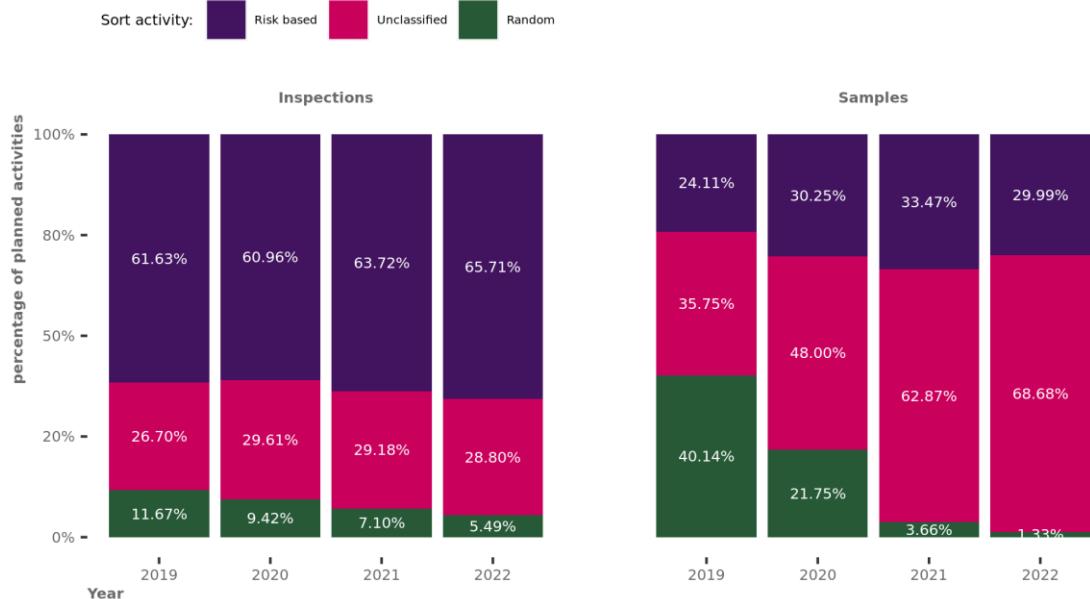

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

### Distribution of planned inspections and samples

From 2019 until 2022

	Year	Relative realization*		
		Risk-based	Random	Unclassifiable
Inspections	2019	95%	61%	120%
	2020	86%	77%	142%
	2021	101%	76%	105%
	2022	96%	32%	124%
Samples	2019	88%	96%	108%
	2020	60%	34%	155%
	2021	51%	2%	131%
	2022	46%	0%	126%

\* total realisation standardized to 100%

# WP Literature Review

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

- Contracted to Delft University of Technology
- Main question: How might risk-based and random methods be combined for surveillance programs?
  - Literature review on methods
  - Strength-weakness analysis on these methods

Table 1. Assessment Framework

	Questions	Answer	STM	ABM	BN	NN	DT	Expert consultation	AHP
Data Requirements	What is the level of input needed?	Quantitative	1	1			1	1	1
		Qualitative					1	1	1
Updating	What is the amount of data needed?	Large			1	1	1		
		Small	1	1				1	1
Implementability	Can the model easily be updated with new data?	Yes			1	1			
		No	1					1	1
Transparency	Does it take a long time to develop the method?	Yes	1	1	1	1	1	1	
		No							
	Is it easy to implement in practice?	Yes						1	1
		No	1	1	1	1	1		
	Is it clear how the model delivers the output?	Yes					1	1	1
		No							

# WP Symposium

## Meeting in Utrecht, 20-22.6.2023

- Day 1: Workshop with 25 experts who design and implement control programs in NL
- Days 2-3:
  - Discuss collected input from experts
  - Establish clear directions for the development of approaches and methods
  - Prioritize tasks for the rest of the project year

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

# WP Concept development

## Two „Solution Avenues“

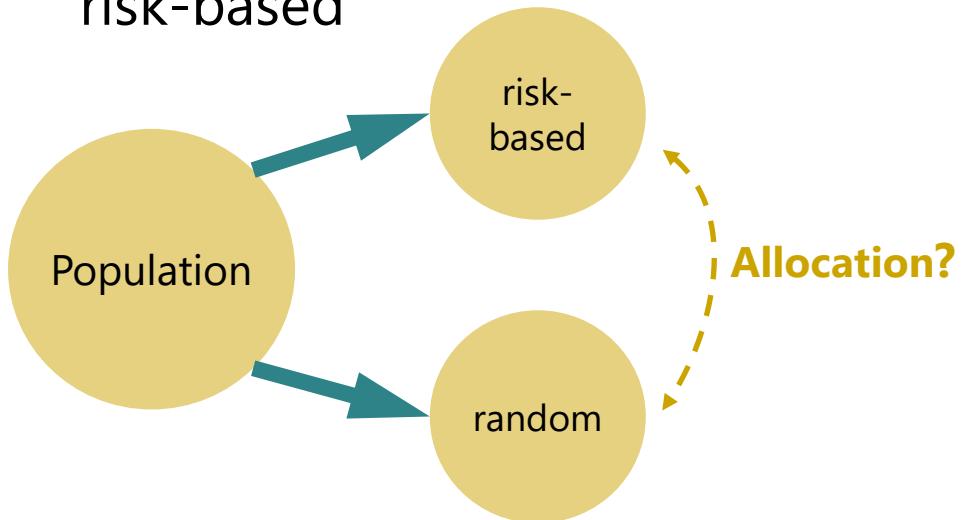

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

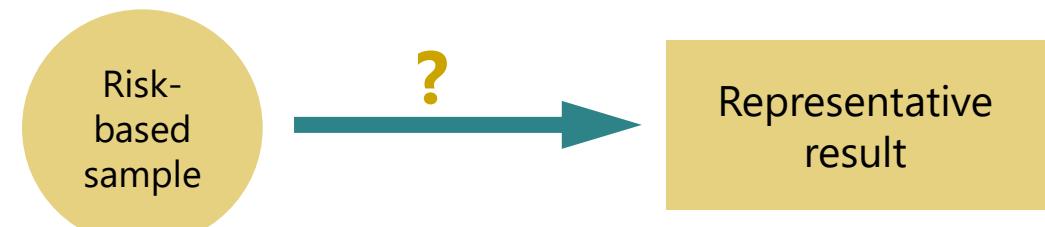

### Allocation:

- 2 separate samples: random and risk-based

### Recovery:

- Derive representative results from risk-based samples

9 scenarios

# Plans for 2024 (Phase 2)

## What are the next steps?

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

- Applying for funding through EFSA Focal Points (3<sup>rd</sup> submission window – Oct. 15)
- Goals:
  - continuing theoretical development of the approaches
  - sharing the approaches developed in Phase 1 with other participating member agencies
  - applying the approaches to set up several **use cases** (at least one per participating agency)

# Want to join?

Nederlandse Voedsel- en  
Warenautoriteit  
Ministerie van Landbouw,  
Natuur en Voedselkwaliteit

- Looking for additional project partners (2-5)
- Interested? Please contact:
  - Ian Kopacka (Austria), or
  - Joost Meekes (The Netherlands), or
  - the Austrian or Dutch Focal Points
