

# **Renewal Assessment Report**

***Bacillus thuringiensis ssp.  
aizawai* strain ABTS-1857**

**Volume 3 – B.4 Further information**

**Rapporteur Member State: The Netherlands**

**Co-Rapporteur Member State: Germany**

## Version history

| When           | What        |
|----------------|-------------|
| September 2018 | Initial RAR |
|                |             |
|                |             |
|                |             |

## **Table of contents**

### **B Summary of the data and information**

|            |  |          |
|------------|--|----------|
| <b>B.4</b> | <b>Further information on the micro-organism.....</b>  | <b>4</b> |
| B.4.1      | Recommended methods and precautions concerning handling, storage,<br>transport or fire ..... | 4        |
| B.4.2      | Procedures for destruction or decontamination .....  | 4        |
| B.4.3      | Measures in case of an accident .....  | 4        |
| B.4.4      | References relied on .....   | 5        |

## **B.4 Further information on the micro-organism**

### **B.4.1 Recommended methods and precautions concerning handling, storage, transport or fire**

**Hazard symbols:** None

**Indications of danger:** None

**Risk phrases:** None

**Safe handling:** Store in a dry and cool place. Keep container in a well-ventilated place. Keep away from food, drink and animal feeding stuffs. Do not drink, eat and smoke in work areas. Other information. Do not mix with water (except for the normal preparation).

### **B.4.2 Procedures for destruction or decontamination**

Dispose of contents/container in accordance with local regulation.

### **B.4.3 Measures in case of an accident**

Containment of a spill; Do not allow to escape into sewage system or water courses.

Clean-up procedures; Clean up spills immediately. Sweep up and place into sealable containers. Dig up heavily contaminated soil and place into drums. Use a damp cloth to clean floors and other objects, and also place in sealable container. Dispose of all waste and contaminated clothing in the same manner as waste chemicals (i.e. via an authorized disposal facility). Do not wash residues into drains or other waterways.

#### **B.4.4 References relied on**

In every chapter (B.1, B.2, etc.) in Volume 3 (AS) the reference relied on heading should start with a paragraph indicating how the literature search was carried out and if this is considered acceptable. It should also be indicated if the RMS can agree with the justifications given by the notifier (especially for non-relevant literature). This is not expected to be a detailed study-by-study consideration. Relevant literature would be evaluated and assessed in the normal way within each section.

For (draft) renewal assessment reports the reference lists at the end of each section/chapter (sorted by data requirement) should include the newly submitted data relied upon as well as those original submitted tests and studies that are still considered relevant to support the application for renewal. However these studies should be clearly identified in the reference list as well as in the individual study sections. This could be done by consistent use of a statement for each study: Previous evaluation: responded “N.A.” for NAS, “Submitted for the purpose of renewal”, or “In DAR (year)”, “In addendum to DAR (year)” or any other appropriate.
