

CLARIFICATION N°2

Call reference: GP/EFSA/PLANTS/2022/09

Call title: Plant Pest Survey parameters estimations

Question: Is it possible to apply only for one of the two lots?

Answer: Yes, you may submit a proposal for one or more lots, but your proposal should indicate clearly for which lot you are applying.

In case you decide to apply for both lots, a separate proposal for each lot must be provided.

Lot 1. Preparation of experimental and statistical protocols to quantify key survey parameters

To guide Member States in obtaining estimates of the key survey parameters, standardized experimental and statistical protocols are required. Lot 1 involves the development and testing of experimental and statistical protocols to estimate the method sensitivity, relative risk and appropriate design prevalence for a survey.

Amount: € 246,000.00 - Duration: 24 months from kick-off meeting.

Lot 2. Collection of evidence in preparation of expert knowledge elicitation on method sensitivity and design prevalence

Where there is insufficient data to estimate key survey parameters, these can also be estimated using expert knowledge elicitation (EKE).

Amount: € 144,000.00 - Duration: 24 months from kick-off meeting.
