

## CLARIFICATION N°2

**Call reference:** GP/EFSA/PLANTS/2023/04

**Call title:** Develop a stepwise approach for a fit for purpose risk assessment, in particular for low-concern active substances and uses

**Question 1:** Considering the Task 3 and the sub-objective 3, could you please clarify if *in vivo* toxicity tests referred to the ecotoxicity (toxicity to non target organisms) or human toxicity should also be considered?

**Answer 1:** Regarding the Task 3 and the related sub-objective 3, it is primarily addressing, but should not be limited to, NTO (ecotoxicity). So NTOs must be covered (and this include wild mammals), but it is up to the applicant to go further and also cover human health in its proposal.
