

# VP<sup>2</sup> repository

*a “place” to store, search and share  
data from research on  
plant-microorganism-virus interactions.*

**Marta Vallino, Piero Caciagli, Simona Abbà, Giancarlo Birello, Anna Perin, Stefano Ghignone**

WHY

## The problem...

WHO

Managing large amount of data is a challenge for many research institutes.

WHAT

Data can be non-homogeneous (pictures, books, register, multimedia...) and not digitized.

HOW

The problems are:

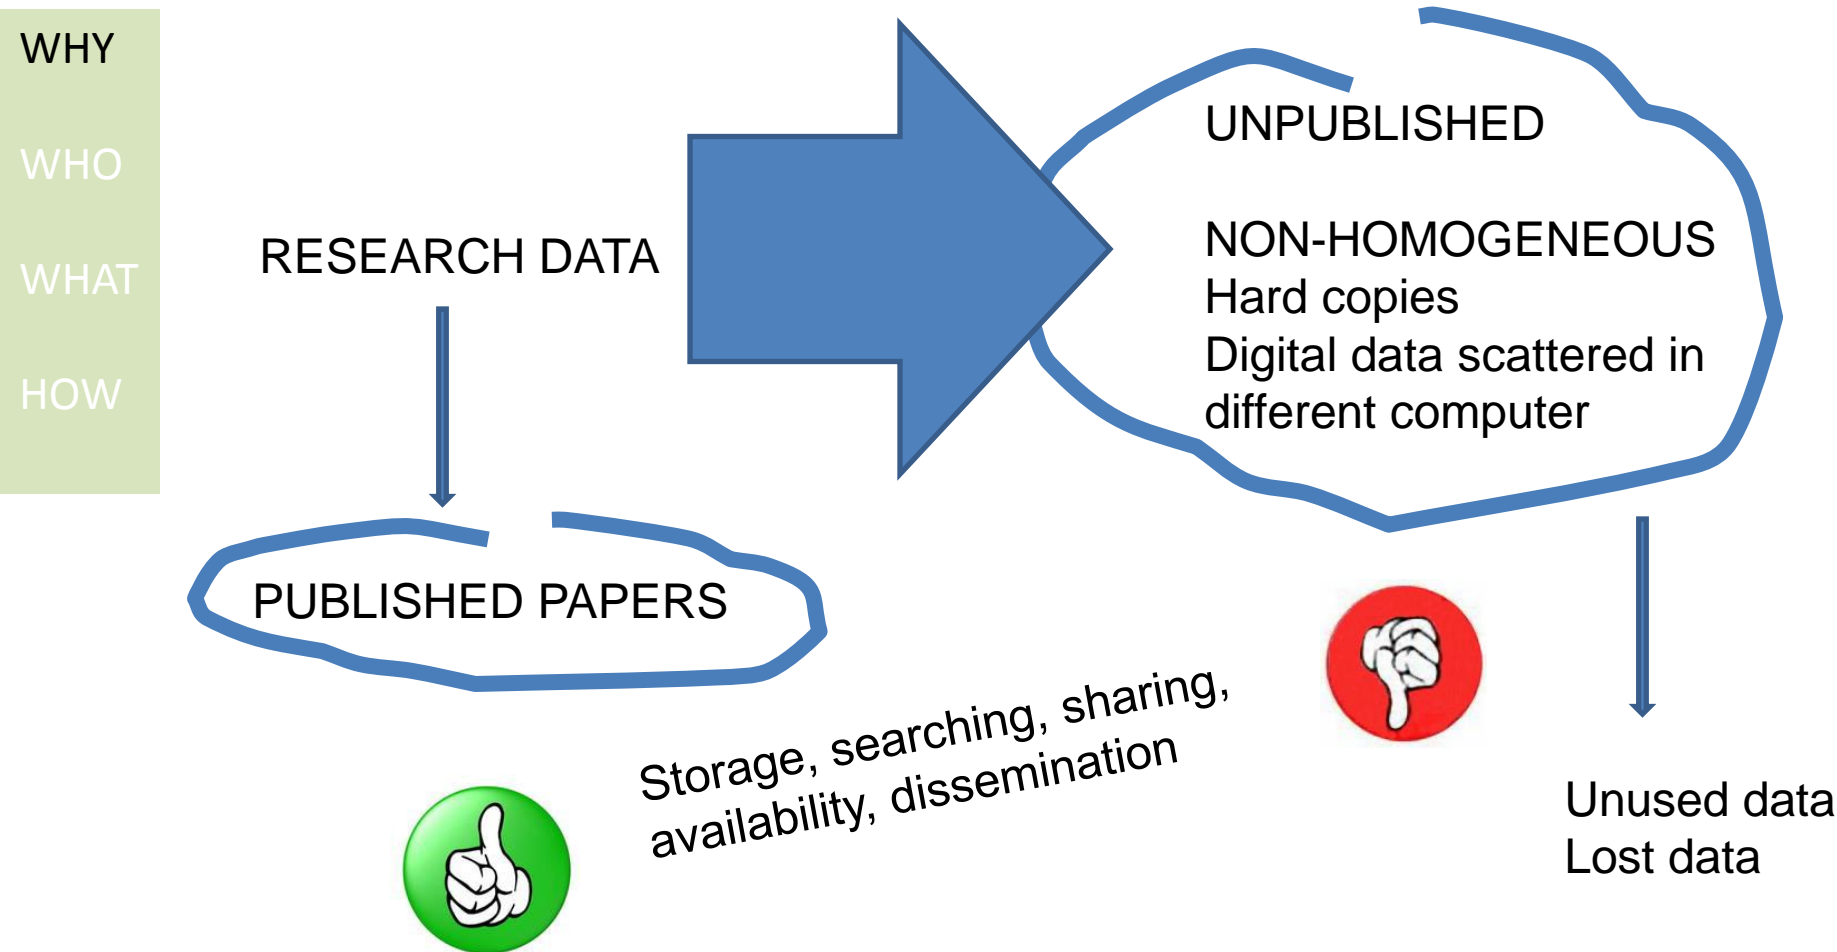

storage

preservation

retrieving

searching

making available the data

## The need/challenge...

WHY  
WHO  
WHAT  
HOW

**PRESERVE**

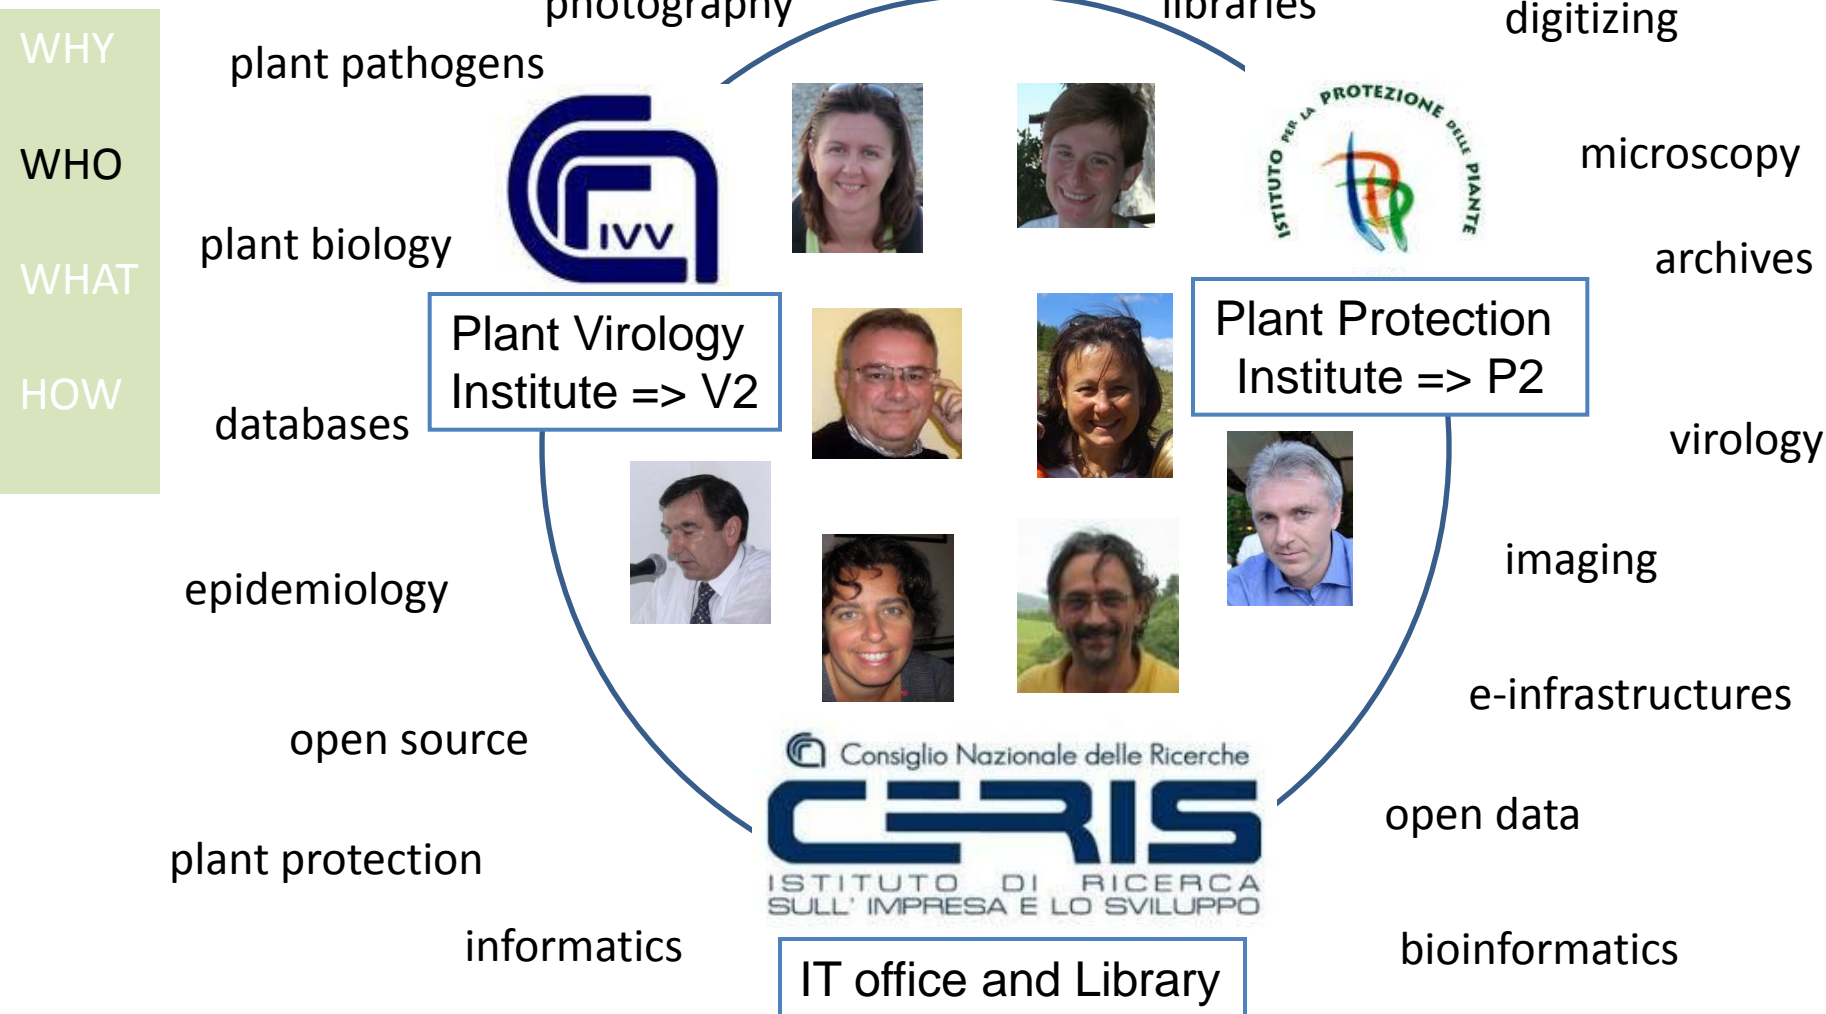

**SEARCH**

**SHARE**

**V2P2repository has been designed to face this challenge.**

WHY

WHO

WHAT

HOW

Data from scientific research in the field of  
**plant-microorganisms-virus** interactions:

- viral infections
- plant disease symptoms
- insect vectors
- viral particles
- biology, biodiversity and ecology of soil fungi
- mycorrhizal roots

Research activity from 1960s...

WHY  
WHO  
WHAT  
HOW

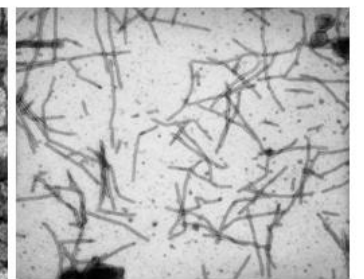

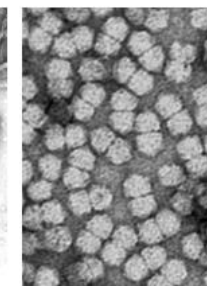

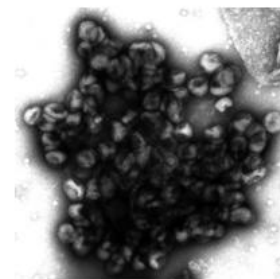

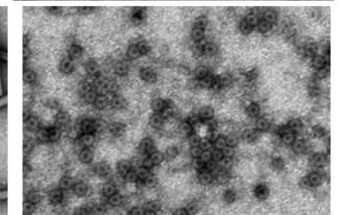

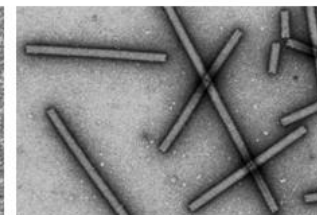

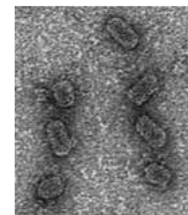

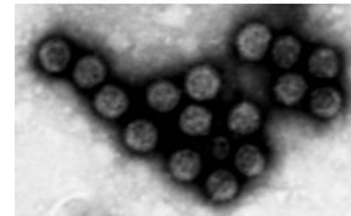

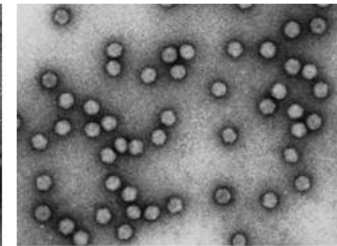

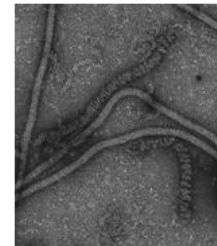

14,600 glass plate negatives  
33,000 film negatives  
16,500 prints on high-definition photo paper  
40,000 b/w and colour slides

Depicting plants showing viral infections, disease symptoms, insect vectors, viral particles

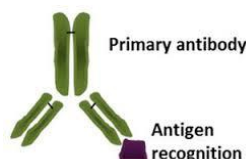

WHY  
WHO  
WHAT  
HOW

## Collections of antibodies

**400 antisera** for rapid diagnosis of different viruses

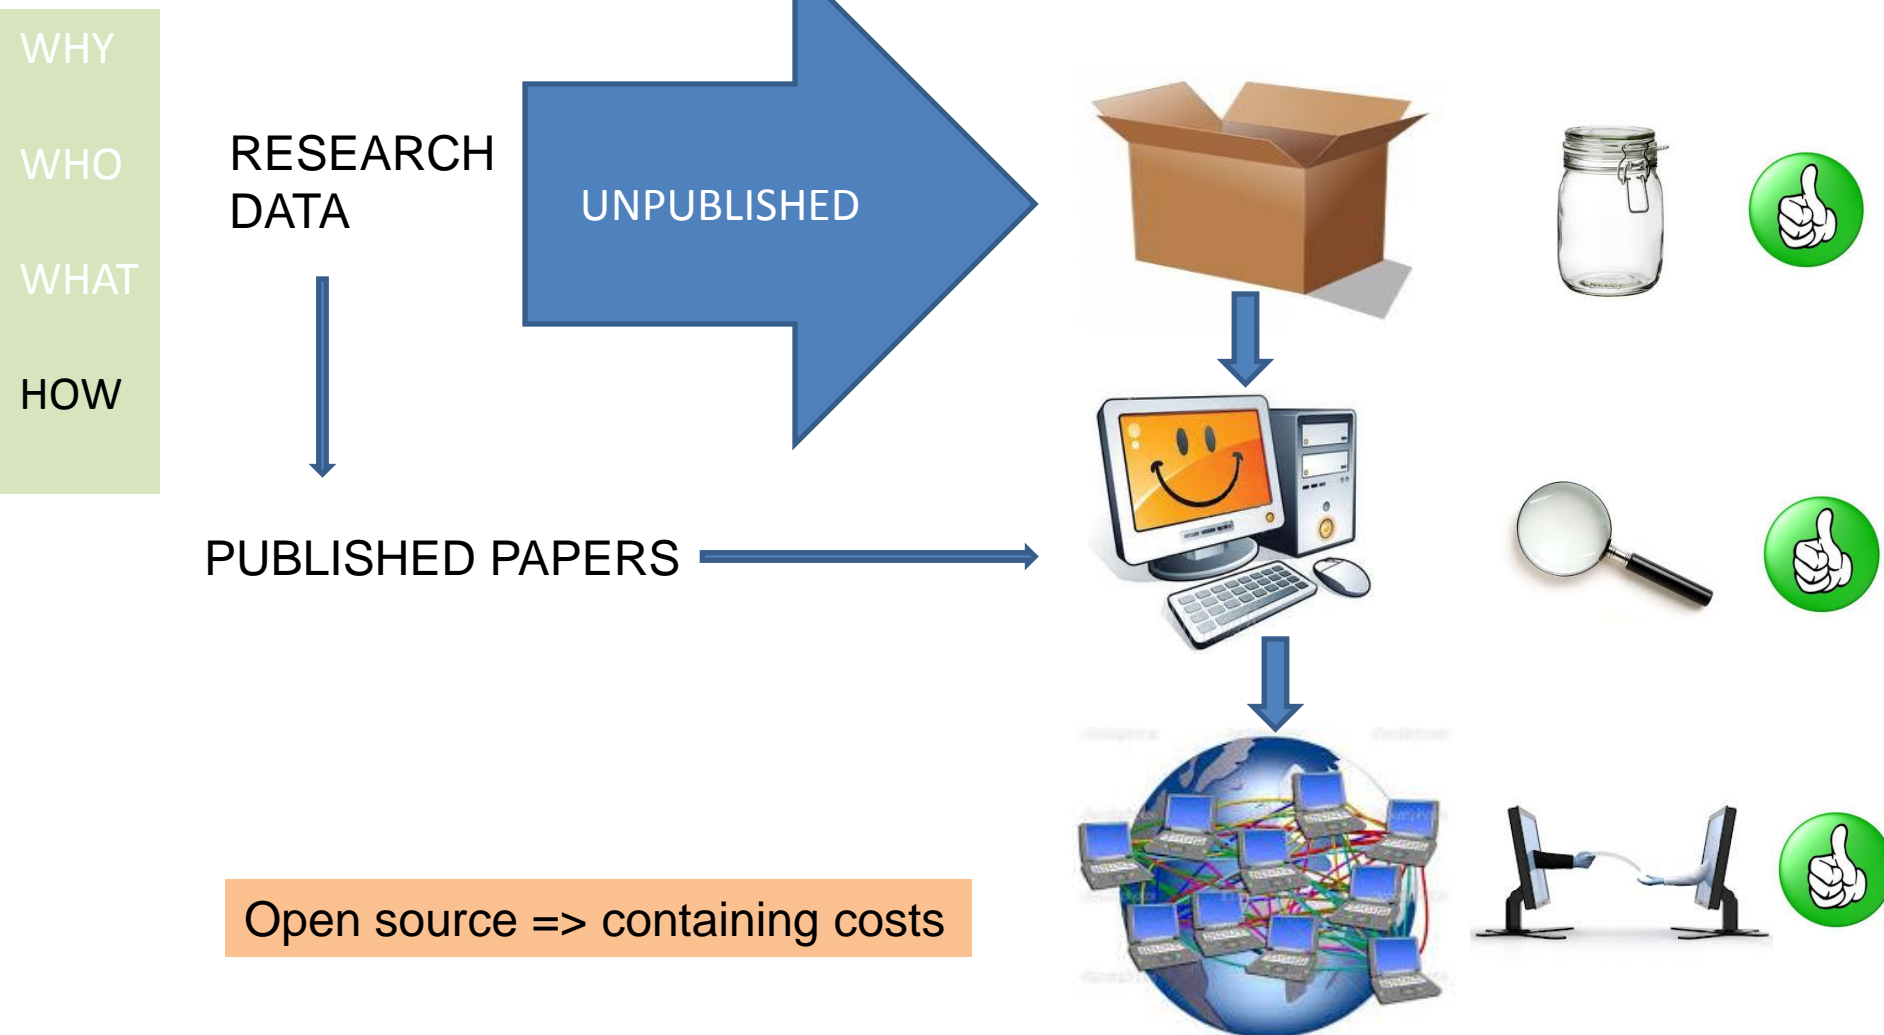

## Collection of viruses

Technical/scientific reports  
Grey literature

- registered with the World Federation of Culture Collections as ID #1057,
- the largest Italian plant virus and phytoplasma collection;
- started in 1960s, now has **3650 entries** (485 non-Italian)
- includes 134 different viral species and 28 phytoplasma isolates;
- stored at -20 °C or in liquid nitrogen.
- Minimum infos: host plant, harvesting date, harvesting place, harvester.

WHY  
WHO  
WHAT  
HOW

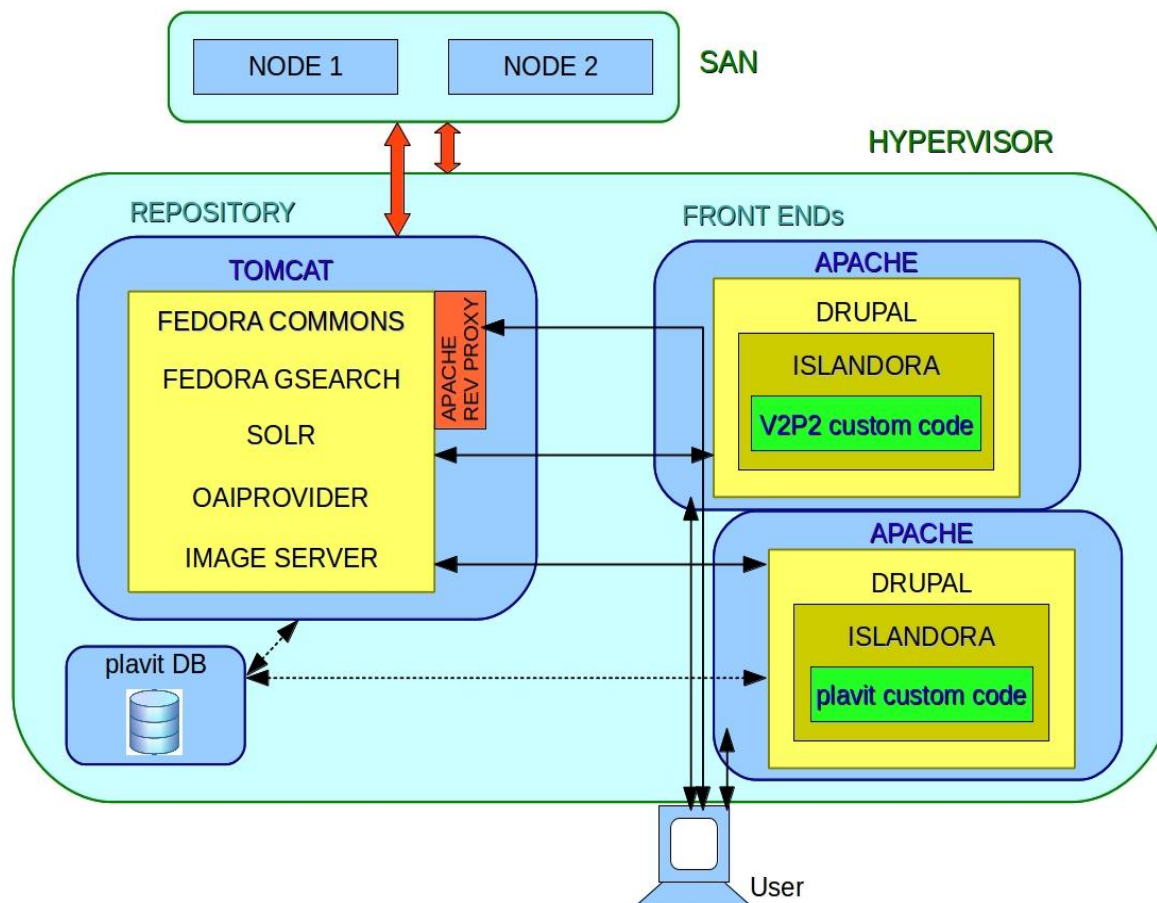

A **REPOSITORY** as the best storage technology for our purposes...  
...possibility to store, ingest, handle objects from different sources;  
...easy data mining and interoperability;  
...long-term preservation.

The repository and its front-end are based on **OPEN SOURCE** software and the project outcomes will be released as **OPEN ACCESS**.

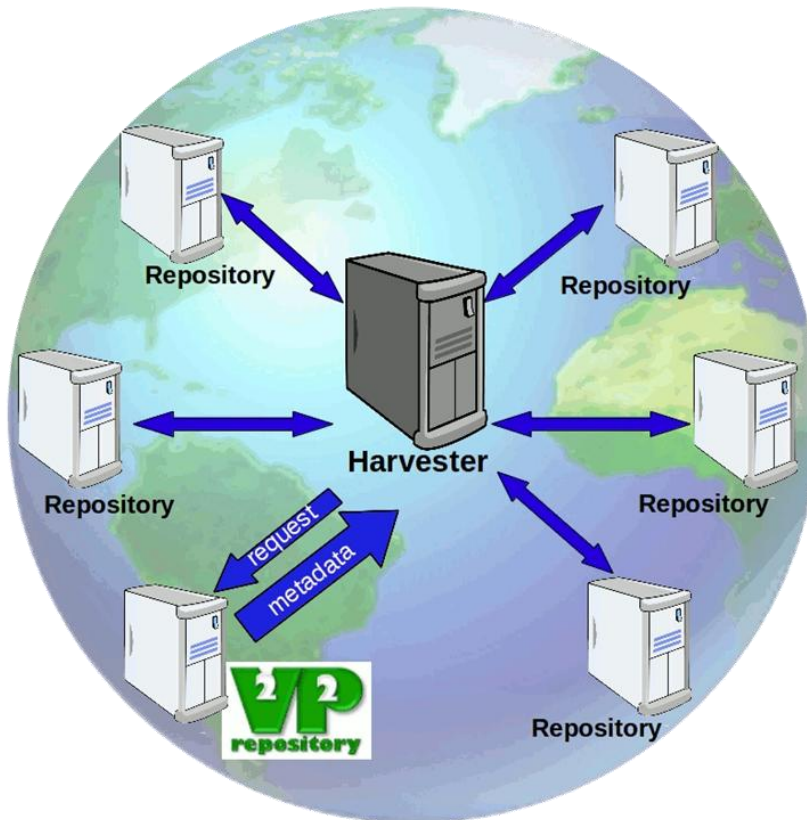

According to ROAR (Registry of Open Access Repositories) V2P2 will be one of the first repositories to use Fedora Commons not only for text and publication archives.

WHY  
WHO  
WHAT  
HOW

- 2-node active/passive open-source cluster
- High Availability Hypervisor using cluster storage
- Customized scripting for ingesting
- Islandora model and modules
- Drupal front-end
- Solr search platform from the Apache Lucene project
- Fedora Commons repository
- uploaded files: high resolution tiff, OCR txt file, pdf/a
- Metadata: Dublin Core
- Ontology and relationships: Agricultural Ontology Services (AOS-FAO)
- Full-text search

WHY  
WHO  
WHAT  
HOW

OAI-PMH harvesting

Our protocols and architecture respect international standards to expose metadata to harvesters.

A harvester is a means for collecting metadata from different repositories and create useful aggregations of metadata

## WORKFLOW

WHY  
WHO  
WHAT  
HOW

**Choosing material**

**Defining a protocol for digitizing**

**Digitizing**

**Defining metadata (Dublin Core)**

**Fill in metadata sheet**

**Transfer to IT office**

**Ingesting**

**Creating relationships**

**RELATION:**

## **Books** (Handwritten registers, Proceedings, Grey literature...)

Choosing material

Defining a protocol for digitizing

Digitizing

Defining metadata (Dublin Core)

Fill in metadata sheet

Transfer to IT office

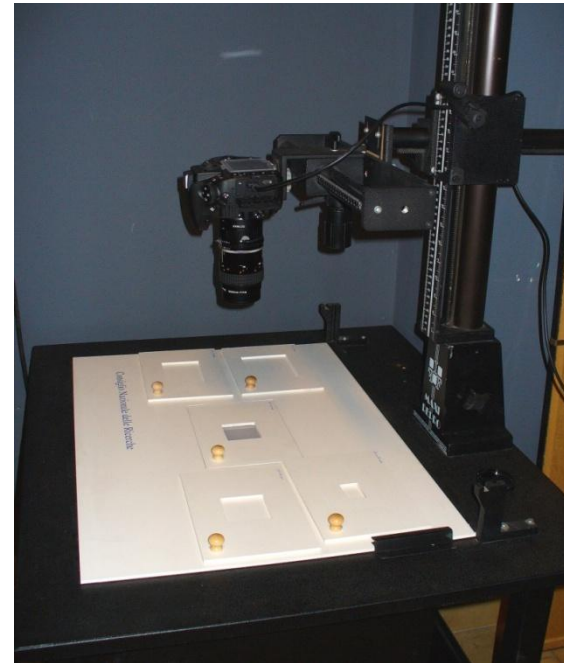

Ingesting

Experience from DigiBESS (CERIS)  
(<http://www.digibess.it/>)

## Images (Negatives, Positives, Printed copies)

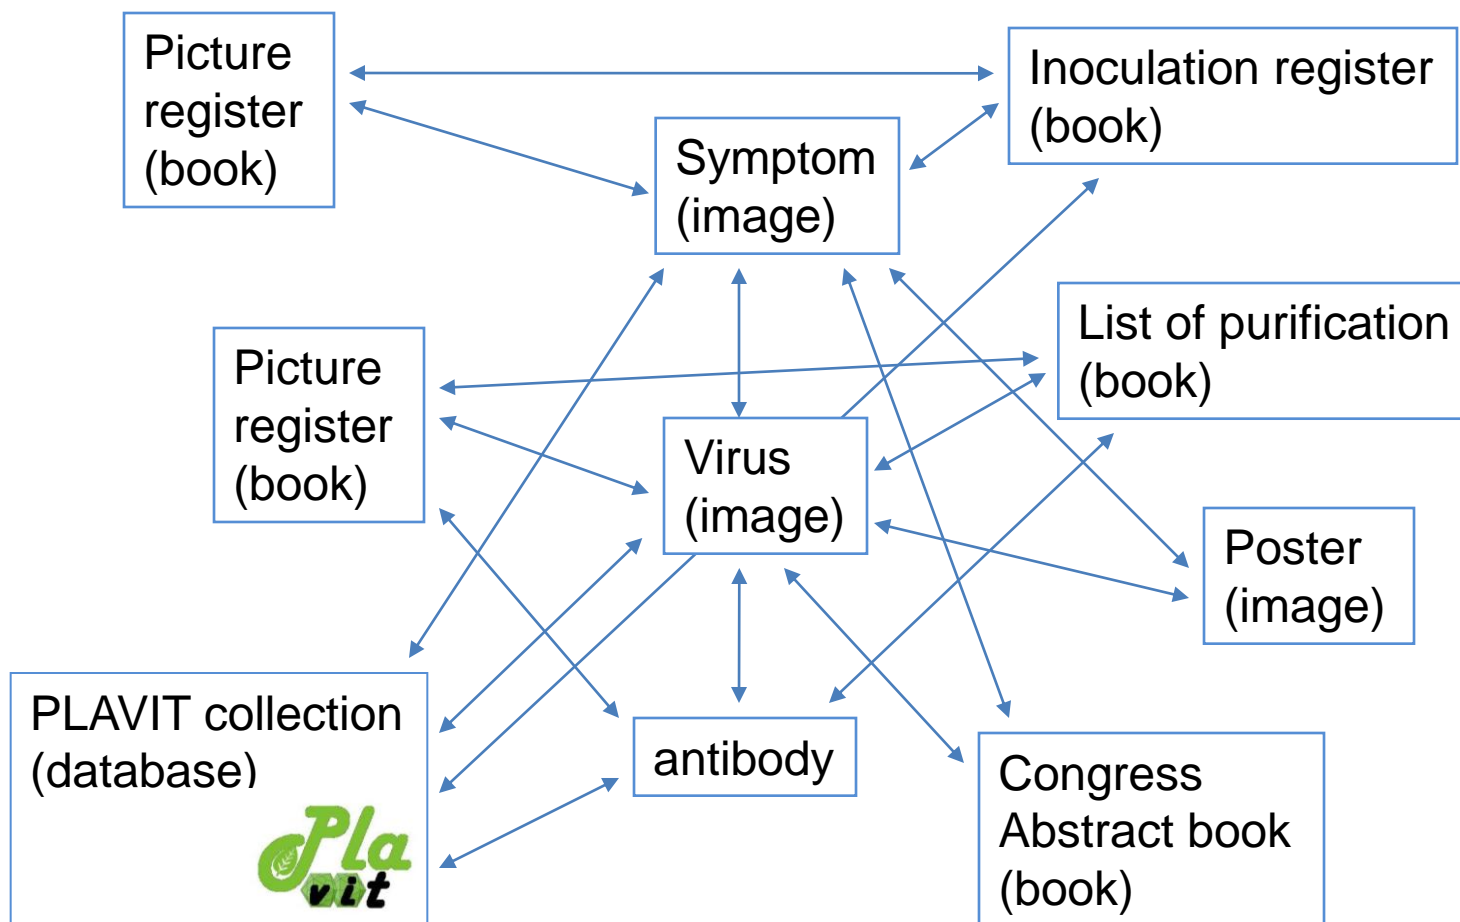

Choosing material  
 Defining a protocol for digitizing  
 Digitizing  
 Defining metadata (Dublin Core)  
 Fill in metadata sheet  
 Transfer to IT office  
 Ingesting

**lack of guidelines** for associating metadata and relationships to biological data, for managing non-homogeneous biological data.

## Creating relationships: FAO-Agricultural Ontology Service

WHY  
WHO

HOW

The screenshot shows a web browser window displaying the 'V2P2 Repository Dev zone' website. The browser's address bar shows the URL 'v2p2dev.to.cnr.it/doku.php'. The website has a header with the title 'V2P2 Repository Dev zone' in large blue letters. Below the title, there is a 'start' link. The main content area includes a paragraph about the V2P2 project at CNR Piedmont Research Area, a quote from the open-source community, and a section titled 'V2P2 Repository (version 2) Work in progress'. This section lists various components and their versions, such as 'Back-end server (Fedora Commons 3.7.1)', 'Base system (Ubuntu 12.04, Tomcat7, Java JDK 7, Fedora Commons 3.7.1)', 'Fedora XACML', 'SOLR 4.6.1', 'Fedora Generic Search Service Version 2.7', 'Adore-Djatoka 1.1', 'Reverse proxy (http and https)', 'Front-end server (Islandora 7.x)', 'Base system (Ubuntu 12.04, Drupal7)', 'Islandora dependencies and tools', 'Islandora main module', 'Islandora Large\_Image and OpenSeadragon', and 'Book SP'. There is also a section for 'V2P2 Repository (version 1)'. The website features logos for IVV, CERIS, and the Joint EFSA-EPPO Workshop.

This work is partially funded by MIUR (Ministero dell'Istruzione, dell'Università e della Ricerca), Progetti annuali (L.6/2000) D.D. 369/Ric. del 26/06/2012.

V2P2repository is a **pilot project** and will include only a very small part of our research data

We are looking for other funding and grants to expand our pilot project!

**THE FUTURE BELONGS TO THOSE WHO  
UNDERSTAND HOW TO COLLECT AND USE  
THEIR DATA SUCCESSFULLY  
(BIG DATA WORLD FORUM, BEIJING 2012)**
