

How to create a free Microsoft Account

A Microsoft Account is basically your username to make use of various Microsoft services such as Office365, OneDrive, Xbox and even Windows 8 or Windows 10. This username can be any existing email address you already own or a new Outlook.com address

Please follow the current procedure:

- 1. To sign up for a Microsoft Account go to <https://signup.live.com>**
- 2. Fill out the form with the address that you want to use. The password which you set here is for your Microsoft Account only; it does not have to be the same password that you currently have for accessing your emails. In fact, it is highly recommended to choose a different password. Also make sure you are using a Strong password.**
- 3. Type the captcha characters and press the "Create account" button.**
- 4. Access the email account you used on the form.**
- 5. Open the message received from the Microsoft Account Team and click on the link to verify your email address.**
- 6. On the webpage opened after you click on the link, insert your email and the password you have typed in on the form to confirm the signup.**
